

Benchmark Taxonomy Or Protocol Table

Define codes, phases, protocol attributes, or taxonomy rows.

Table 1: Benchmark taxonomy and protocol summary.

Axis	Code	Reader-facing definition	Count
<i>Input channel</i>			
Channel	C1	Instruction appears in user-visible content and competes with the task goal.	38
Channel	C2	Instruction is carried through a tool result, notification, or retrieved context.	27
<i>Outcome target</i>			
Target	T1	The outcome changes an external state or sends information outside the task.	31
Target	T2	The outcome degrades task completion without executing the target action.	19

Width policy: tabularx with a prose definition column; group rows prevent repeated long labels.
