

Error Or Failure Analysis Table

Summarize failure modes, counts, examples, and diagnostic implications.

Table 1: Failure analysis summary. Counts are descriptive and should share a clear denominator.

Failure mode	Count	Example cue	Diagnostic implication
Retrieval miss	42	Missing entity	Add retrieval coverage checks before answer generation.
Tool misuse	27	Wrong argument	Validate tool schema and reject ambiguous calls.
Premature stop	19	Partial evidence	Require completion checks for multi-step tasks.
Calibration error	16	High confidence	Recalibrate confidence thresholds on validation data.

Width policy: tabularx with compact counts and a prose diagnostic/action column.
