

Qualitative Example Table

Show representative cases, model outputs, human labels, or explanation snippets.

Table 1: Qualitative examples. Text is shortened to the part needed for the reader task.

Case	Input cue	Model behavior or explanation	Label
Q1	Ambiguous goal	Requests clarification before choosing between two incompatible actions.	Safe completion
Q2	Hidden conflict	Follows a retrieved instruction that contradicts the visible user request.	Instruction conflict
Q3	Missing premise	Produces a fluent answer but omits the required source constraint.	Unsupported output
Q4	Tool boundary	Refuses to call an external tool until the required field is provided.	Correct deferral

Width policy: Prose-heavy table with wrapping columns; keep it appendix or narrow body summary.
